## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the turbocharger of claim 1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Bentz et al. (US 3752132). Regarding claim 1, Bentz et al. discloses a circuit arrangement with a low temperature circuit (39c, 25c) for the cooling of charging air in a motor vehicle comprising a turbocharger (31c) and an engine cooling circuit (21c, 11c) for cooling an engine (13c), wherein the low temperature circuit can be temporarily coupled (41c) to the engine cooling circuit in such a way that coolant can pass from one circuit to another and back (43c, 44c, Fig. 4).

4. Regarding claims 2-5, 9 and 10, Bentz et al. discloses the circuit of claim 1 with a feedline (47c) between the engine cooling circuit (11c) and the low temperature circuit (25a) leading from the engine thermostat (44c) in the engine cooling circuit downstream of the engine, to a mixed thermostat (43c) integrated in the low temperature circuit (25c, Fig. 4), the feedline being between the engine thermostat (44c) and the mixed thermostat (43c) and the mixed thermostat being an expansion thermostat (col. 3, lines 8-10).

5. Regarding claims 6-8 and 11-20, Bentz et al. discloses the circuit of claims 1-5 where during warm-up of the engine (13c) and during the warm state of the engine,

coolant flows out of the engine cooling circuit (21c, 11c) into the low temperature circuit (25a, through 47c), where warm coolant from the engine (13c) is used for heating the charging air in the charging air/coolant cooler (29c, Fig. 4).
